Dear Hiring Manager,

As an expected graduate of the Computer Programming and Analysis - Advanced Diploma program at George Brown College, I have acquired an in-depth understanding of numerous programming languages. I also gained knowledge of various web frameworks and libraries such as React, Angular, Spring, Django, Laravel, Flask and developed a lot of critical thinking and collaborative skills. Having gained the ability to break down a problem into smaller pieces and work my way up using and learning the necessary tools to overcome it, this has greatly influenced my personal projects. For example, by working on my most recent project, PKG Hound, I have learned ways to properly implement and use a cross platform framework such as Ionic with a custom backend that handles authentication and CRUD API using google firebase.

In addition, my experience as a Game Developer apprentice at Kindly Beast, I co-operated with numerous cross functional teams and implemented audio queues for a playable character, as well as utilized workflow management tools such as SourceTree and Jira. This role allowed me to gain strong interpersonal and professional problem-solving skills.

I truly hope to make a solid contribution to a team at your company, and I look forward to speaking with you in person.

Sincerely,

Emmanuel Sogelola
