SUMMARY

Backend-oriented Security Engineer with experience building **production software**, **data pipelines**, **APIs**, and **automation** across high-scale product and security environments. Strong foundation in **TypeScript**, **Python**, **Go**, **SQL**, **AWS**, **GraphQL**, and infrastructure tooling. Interested in building reliable integrations, developer platforms, and AI-augmented systems that help teams move faster without sacrificing quality.

EXPERIENCE

Security Engineer I, Security Incident Response Team

Sep. 2023 – Present

Twitch / Amazon

New York, New York

- Build and operate **production detection and response workflows** across identity, cloud, application, and internal developer infrastructure using **TypeScript**, **Python**, **Go**, **SQL**, and AWS telemetry.
- Developed backend automation and investigation tooling for **token validation**, vulnerable package discovery, metadata scanning, authorization analysis, and operational runbooks used in on-call response.
- Partner with infrastructure and product engineering teams to define **data contracts**, logging requirements, response workflows, and durable fixes across access control, alerting, and remediation systems.
- Built and maintained **high-signal detection logic** over large-scale event data, focusing on historical validation, low-noise alerting, and reliable operational behavior.
- Performed vulnerability and supply-chain investigations using **SBOM data**, repository scanning, DNS analysis, network telemetry, cloud logs, and application context to determine exposure and remediation priority.
- Supported **container and cloud security** initiatives through vulnerability scanning design, IAM policy review, ECR/container telemetry analysis, and AWS-based infrastructure investigation.
- Developed **AI-assisted security workflows** and agentic tooling for investigation support, security data access, infrastructure inspection, and automation of repetitive response tasks.

Software Engineer Intern, iOS

May 2023 – Aug. 2023

Twitch / Amazon

San Francisco, California

- Shipped **production iOS features** for Twitch discovery and followed-stream filtering, including language selection and stream sorting experiences.
- Implemented **feature-flagged UI flows** and **GraphQL-backed data fetching** to reflect user preferences across live stream discovery surfaces.
- Built reusable client-side state handling for language tags, filter selections, and **real-time stream updates**.

Software Engineer Intern

Jan. 2023 – May 2023

Wealthsimple

Toronto, Ontario

- Built **Apache Airflow DAGs** in Python to automate data retrieval from Ruby APIs, improving reliability for internal reporting and HRIS workflows.
- Merged and normalized datasets from **multiple external APIs** in Ruby, improving consistency across employee and operational data pipelines.
- Deprecated inactive feature flags and refactored legacy **Angular** components, reducing maintenance overhead while preserving backward compatibility.
- Supported production operations through **on-call ticket resolution**, debugging, and cross-functional engineering support.

Software Engineer Intern

Sep. 2022 – Dec. 2022

Zendesk

Montreal, Quebec

- Created migration tooling to remove deprecated applications from **1.03M accounts**, including **59.2K ghost accounts**, improving account hygiene and data consistency.
- Documented data aggregation workflows across **Tableau** and **Google Data Studio** for analytics and operations teams.
- Improved storage and retrieval processes for **1,000+ archived reports**, enabling more reliable access to historical reporting data.

Software Engineer Intern, Pipeline

May 2022 – Aug. 2022

Momentive / SurveyMonkey

Ottawa, Ontario

- Migrated **41 legacy Jenkins jobs** to **GitHub Actions** workflows, reducing CI/CD maintenance overhead and lowering production pipeline cost by **23%**.
- Built connectivity between **GitHub Actions runners** and a Selenium testing grid using **Ansible**, **Terraform**, and internal cloud provisioning tools.
- Parallelized automated test suites with **Allure Reports**, cutting test runtime by **45%** and improving engineering feedback loops.

Junior Developer Intern

Sep. 2021 – May 2022

InnovFin Consulting Inc.

Peterborough, Ontario

- Built and maintained a content management platform serving **1,000+ monthly readers** using **Node.js**, **JavaScript**, **GraphQL**, **React**, **Amazon EC2**, and **AWS Amplify**.
- Contributed to a blockchain marketplace and cross-platform mobile application using **React Native**, **Moralis Web3**, **Solidity**, and **React**.
- Refactored **32 React components** into reusable services and components, improving maintainability and reducing duplicated frontend logic.

PROJECTS

Synchronized | *AI-Native Financial Intelligence Platform, Technical Founder / Builder* 2025 – Present

- Building an **AI-native platform** that turns fragmented financial documents, spreadsheets, CRM data, and deal workflows into a **structured, auditable knowledge layer** for financial teams.
- Designed and implemented backend architecture across a **Rails GraphQL API**, **FastAPI AI service**, **PostgreSQL**, **Redis**, **S3**, and **Neo4j**, with multi-tenant scoping and role-based access controls.
- Built document intelligence workflows for **parsing**, **extraction**, **human review**, provenance tracking, confidence scoring, and **audit logging** in trust-sensitive financial workflows.
- Designed product flows for document ingestion, structured extraction, queryable entities, relationship mapping, and human-in-the-loop approval workflows.

Security Automation and Agentic Tooling | *Go, TypeScript, Python, SQL, AWS* 2024 – Present

- Built reusable investigation tooling for operational workflows, including **query templates**, **token validation notebooks**, vulnerable package discovery, metadata scanning, and authorization analysis.
- Developed **Go** and **TypeScript** services for agentic workflows, including internal tools for data access, infrastructure inspection, and automation of repetitive response tasks.

EDUCATION

McMaster University Sep. 2021 – Apr. 2024

Bachelor of Technology in Software Engineering Technology

Hamilton, Ontario

George Brown College

Sep. 2018 – May 2021

Advanced Diploma in Computer Programmer Analyst

Toronto, Ontario

TECHNICAL SKILLS

Languages: TypeScript, Python, Go, JavaScript, SQL, Ruby, Swift, Java, C/C++, HTML/CSS

Backend: Node.js, Express, Rails, FastAPI, GraphQL, REST APIs, Webhooks, PostgreSQL, Redis, MongoDB, Neo4j

Data & Pipelines: Apache Airflow, ETL Workflows, Athena, Trino/Presto SQL, Pandas, Jupyter, Event Data, Reporting Pipelines

Infrastructure: AWS, IAM, ECS Fargate, ECR, Lambda, S3, CDK, Terraform, Docker, CI/CD, GitHub Actions, Ansible

Security: Incident Response, Detection Engineering, Threat Modeling, OAuth, Identity Security, Cloud Security, GraphQL Security, Supply-Chain Security

AI & Developer Tooling: Agentic Workflows, LLM Tooling, MCP Servers, Runbook Automation, Developer-Facing Tooling
